

In Reference to RM-10867,

The NC-VEC's proposals have several items of merit that are worthy of adoption.

I have no opposition to this proposal.

I would like to strongly comment that I agree there is no valid reason to retain the CW (Morse) requirement for licensing and testing for any class of license.

Retaining the 5WPM testing requirement places unnecessary requirements upon the FCC, VEC and the testing applicant that has no bearing on the technical aspects of the hobby.

My comments are to adopt all aspects of this petition
